

Part 9

ORM in Django Part-2

VERSION: 4.0.1

WRITTEN AND DESIGN BY: BABAR ALI

Django Model Field Types

BooleanField:

```
present = models.BooleanField(default=False)
```

CharField:

```
present = models.CharField(max_length=120)
```

Date Field In Django Model

Date Field:

class DateField(auto_now=**False**, auto_now_add=**False**, **options)

A date, represented in Python by a **datetime.date** instance. Has a few extra, optional arguments:

DateField.auto_now:

class DateField(auto_now=**False**, auto_now_add=**False**, **options)

A date, represented in Python by a **datetime.date** instance. Has a few extra, optional arguments:

DateField.auto_now_add:

Automatically set the field to now when the object is first created. Useful for creation of timestamps. Note that the current date is always used; it's not just a default value that you can override.

DateField Example

```
date_field = models.DateField(auto_now_add=False)
```

Add person

First name:

Last name:

Related To Person Class: ▼

☐ Present

Date field: Today | 

Note: You are 8 hours behind server time.

DateTimeField Example

```
date_field = models.DateTimeField(auto_now_add=False)
```

Date field:

Date: Today | 

Time: Now | 

Note: You are 8 hours behind server time.

Email Field

A [CharField](#) that checks that the value is a valid email address using [EmailValidator](#).

```
User_email = models.EmailField()
```

Email:

File Field

A file-upload field.

```
upload_CV = models.FileField(upload_to=None, max_length=100)
```

Upload CV:

Choose File No file chosen

Image Field

Inherits all attributes and methods from [FileField](#), but also validates that the uploaded object is a valid image.

```
Upload_img = models.ImageField(upload_to=None, height=None, width=None)
```

Upload CV:

Choose File No file chosen

Integer Field

An integer. Values from -2147483648 to 2147483647 are safe in all databases supported by Django.

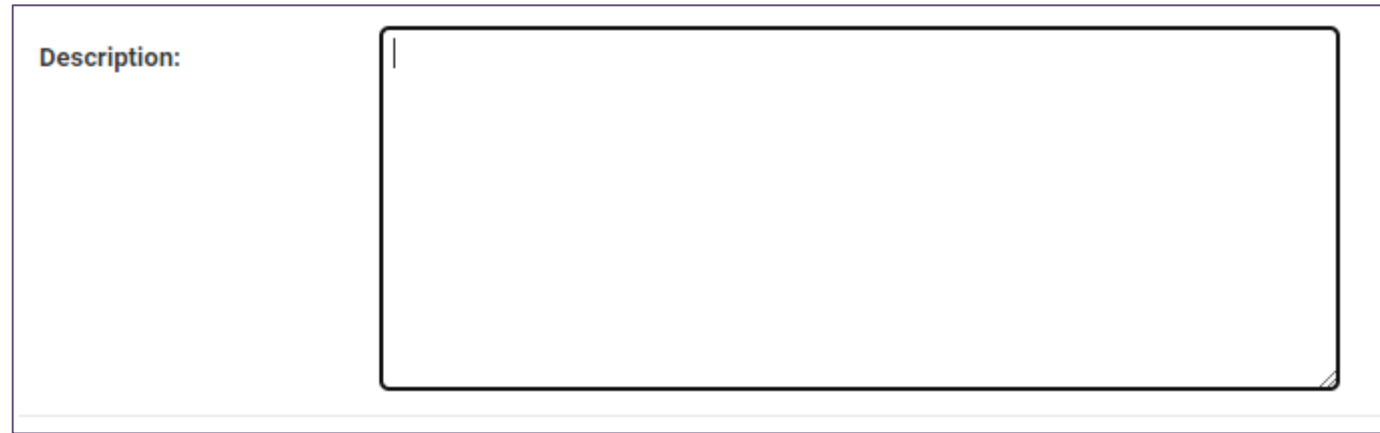

```
contact = models.IntegerField()
```

Contact:	
-----------------	----------------------

Text Field

A large text field. The default form widget for this field is a [Textarea](#).

```
description = models.TextField()
```

Description:

Time Field

A time, represented in Python by a **datetime.time** instance. Accepts the same auto-population options as [DateField](#).

```
Pick_time = models.TimeField(auto_now_add=False)
```

Pic time:

Now | 

Note: You are 8 hours behind server time.
